**Manual tensioning systems,
spacers and adjusting plates**

Manual tensioning systems, spacers and adjusting plates

Hanger type: Excenter tensioning system

System F. A. Schmahl with spacers and adjusting plates for slide fitting.

Hanger type: Excenter tensioning system

Box magnet hanger with steel magnet box.

Manual tensioning systems, spacers and adjusting plates

All hangers are produced in welded form from high-quality tool steel. Due to precision finishing and the use of high-quality

steels, which are hardened by us, we can assure you of the faultless function and long service life for the hangers.

Hanger type:
Excenter tensioning system

Box hanger with adjusting plates and spacers
for suspension fitting

We can supply all hanger systems from perforated hangers to box hangers and on to surface-ground insert hangers, as well as all other hanger systems in common use in Europe.

The adjusting plates and spacers required for the relevant system are of course manufactured to the highest quality, in order to guarantee a long service life of the tool.

Our in-house systems offer quick fitting times and maximum quality. These tensioning systems are an efficient tool for your application area in the modern sawmill.
